Claim 1 and the claims which depend thereon are allowed since claim 1 recites a jig for a quilting machine of the type having a sewing machine movably mounted on a table, a stationary gear fixedly connected to jig body, a pinion gear engageable with said stationary gear for orbital movement thereabout, and a stylus securable to said sewing machine.

Claim 11 and the claims which depend thereon are allowed since claim 11 recites a jig for a quilting machine of the type having a sewing machine movably mounted on a table, a stationary gear fixedly connected to a jig body, a set of interchangeable pinion gears of varied diameters, any selected one of said set being receivable on a lower end of a shaft and engageable with said stationary ring gear, and a stylus connectable to the sewing machine so as to extend downwardly therefrom.

Claim 17 and the claims which depend thereon are allowed since claim 17 recites a jig for a quilting machine of the type having a sewing machine movably mounted on a table, a stationary gear fixedly connected to a jig body, a set of interchangeable pinion gears of varied diameters, any selected one of said set being receivable on a lower end of a shaft and engageable with said stationary ring gear, and a stylus connectable to the sewing machine so as to extend downwardly therefrom.

The patent to Valeriote et al (U.S.P. 6,860,211) is cited to disclose a guide for a quilting machine to enable the formation of curved patterns in which a stylus that engages template slots is affixed to a sewing machine causing the machine to form a stitching pattern according to a specific pattern determined by the template.
